

ESALIENS CONSERVATIVE

until 2nd February 2020, the Subfund operated under the name **Esaliens Saver**

risk profile

Risk indicator is presented in accordance with the Key Information for Investors. The indicator is calculated based on the historical volatility of the sub-fund's rates of return resulting from the implemented investment policy and may change in the future. Even the lowest risk category does not mean that the sub-fund is risk-free. Other risk factors related to investing in the sub-fund, which are not included in the indicator, are presented in the Key Information for Investors and the Fund Prospectus.

investor's profile

The subfund is designed for an investor who only accepts minimum risk, wishes to preserve the investment value in real terms, definitely avoids exposure to equity market and accepts profits similar to bank deposits with higher liquidity. The evaluation of subfund's performance should not be made for a period shorter than 3 months.

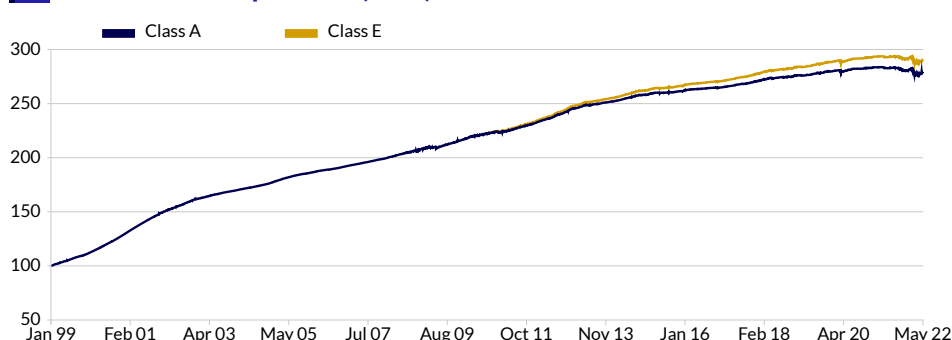

investment process

The subfund's objective is to preserve asset value in real terms and generate income from the subfund's net investments. Up to 100% of the assets are invested in debt securities and money market instruments issued by the State Treasury and other issuers including companies. The subfund invests also in bonds with maturity above 2 years as well as bond and money market instruments issued by commercial law companies and local governments. In its investments, the subfund aims to achieve the highest possible rate of return on assets, while almost entirely eliminating the securities price volatility risk, mitigating the interest rate risk, issuer's default risk, foreign exchange risk, risk related to the loss of value of the security and maintaining high liquidity. Ideally, the subfund allocates up to 100% of its assets in debt instruments. The sub-fund is actively managed.

subfund details

Type	fixed income subfund

glossary

Participation unit A - offered to all the participants of the fund. The fee is collected while the participation units are purchased.

Participation unit E - offered exclusively for investment and pension plans and programmes. The fund doesn't collect any initial or final fee.

Alpha - measures the relationship between a fund's actual performance and the performance it achieved by virtue of market movements alone. In other words, it is a measure of the portfolio manager's added value.

Beta - measures the relationship between a fund's volatility and that of its benchmark. A fund with a beta of 1.00 can be expected to show similar volatility to the benchmark. A fund with a higher beta is likely to be more volatile than the benchmark, while a fund with a lower beta can be expected to rise and fall more slowly than the benchmark.

R² - measures the degree to which a fund's performance "character" is driven by its benchmark. For example, a fund with an R² of 0.80 records that 80% of the fund's historical behavior was attributable to movements in its benchmark.

Tracking error - the expected or actual maximum deviation of a fund's returns from those of its benchmark over a twelve and thirty six month period.

Standard Deviation - standard deviation of fund returns measures how much a fund's total returns have fluctuated in the past. Standard deviation is widely used as a basic risk measure. It shows how much a fund's annual return is likely to vary from its average annual return over a longer period. It is particularly useful when comparing two funds, in order to see which is likely to be the more volatile. The higher the standard deviation score, the more volatile the fund.

Sharpe Ratio - the Sharpe ratio measures the fund's risk adjusted return. It shows the ratio of a fund's excess return (i.e. the return in excess of that from a 'risk-free' asset, say, Treasury Bills) to the level of risk taken (i.e. the fund's standard deviation). The higher the score, the better the risk/reward trade-off of the fund.

Information Ratio - measures management efficiency, describing the relation of excess return to its standard deviation. The excess return is the difference between fund's and benchmark's rate of return. Benchmark tracks the results of a fund group homogeneous in terms of investment policy.

important information - read carefully

This is an advertising information. This material does not contain sufficient information to make an investment decision. The promoted investment means the purchase of participation units.

Detailed information concerning the ESALIENS Conservative ("subfund") within ESALIENS Umbrella Open-End Investment Fund is included in the prospectus and the key investor information documents, which are available on the www.esaliens.pl website, at individual fund distribution outlets and in a written form at the registered office of the fund. The fund's prospectus and the key investor information documents include the information required to assess the investment and indicate **the risk related to fund participation**, charges, fees and information of taxes. **Before investing in the subfund you should analyze the key investor information documents concerning the selected category of the subfunds participation units as well as the fund's prospectus.**

Past performance is no guarantee of future returns. The subfund's performance does not cover the capital gains tax and fees charged at the purchase of participation units. The individual rate of return depends on the purchase and redemption day, as well as on the fees and taxes collected. The fund does not guarantee that the investment objective will be achieved or that a specific investment result will be achieved. Fund's participants must take into account the possibility of losing at least a part of the deposited funds.

The fund may invest more than 35% of its asset value in securities issued by the Treasury, the National Bank of Poland, the European Bank for Reconstruction and Development or the European Investment Bank as well as in securities issued by a Member State, a regional government or a regional government of a Member State.
