

# ESALIENS STABLE

## risk profile

Risk indicator is presented in accordance with the Key Information for Investors. The indicator is calculated based on the historical volatility of the sub-fund's rates of return resulting from the implemented investment policy and may change in the future. Even the lowest risk category does not mean that the sub-fund is risk-free. Other risk factors related to investing in the sub-fund, which are not included in the indicator, are presented in the Key Information for Investors and the Fund Prospectus.

## investor's profile

The subfund is addressed to the Investors seeking a subfund striving to achieve a return rate above the assigned benchmark in 2-year periods, mostly by investing in Treasury bonds, commercial securities and - to a lesser extent - in shares. The Investors should accept moderate investment risk relating to limited exposure to equity markets. The equity market exposure of a part of subfund's assets allows the Investors to participate in the market's growth. At the same time, as the exposure is relatively low, the negative effect of a serious market adjustment on the investment value is limited. The subfund may be intended, among other things, for systematic savings within long-term saving and pension programmes (CPO, IKE, IKZE). Management results should not be assessed in periods shorter than 2 years.

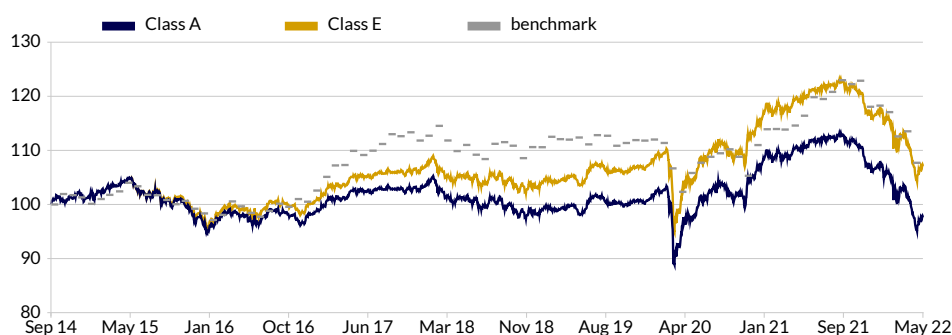

## investment process

The subfund invests 25% to 45% of its assets in company shares and other securities. In the typical allocation, 65% of the subfunds assets are invested in debt securities and money market instruments, while 35% in shares. The equity part of the portfolio, selected based on a fundamental analysis, focuses on companies of different sizes, with relatively low valuation, solid financial condition and high probability of stable financial results in the future. The subfund may invest in foreign companies, including undertakings from the Central and Eastern Europe region, however, Polish companies constitute the major part of investments. The sub-fund is actively managed.

## subfund details

Type	stable growth subfund	
Subfund size	PLN 171.6 m	
	Class A	Class E

## glossary

**Participation unit A** - offered to all the participants of the fund. The fee is collected while the participation units are purchased.

**Participation unit E** - offered exclusively for investment and pension plans and programmes. The fund doesn't collect any initial or final fee.

**Alpha** - measures the relationship between a fund's actual performance and the performance it achieved by virtue of market movements alone. In other words, it is a measure of the portfolio manager's added value.

**Beta** - measures the relationship between a fund's volatility and that of its benchmark. A fund with a beta of 1.00 can be expected to show similar volatility to the benchmark. A fund with a higher beta is likely to be more volatile than the benchmark, while a fund with a lower beta can be expected to rise and fall more slowly than the benchmark.

**R<sup>2</sup>** - measures the degree to which a fund's performance "character" is driven by its benchmark. For example, a fund with an R<sup>2</sup> of 0.80 records that 80% of the fund's historical behavior was attributable to movements in its benchmark.

**Tracking error** - the expected or actual maximum deviation of a fund's returns from those of its benchmark over a twelve and thirty six month period.

**Standard Deviation** - standard deviation of fund returns measures how much a fund's total returns have fluctuated in the past. Standard deviation is widely used as a basic risk measure. It shows how much a fund's annual return is likely to vary from its average annual return over a longer period. It is particularly useful when comparing two funds, in order to see which is likely to be the more volatile. The higher the standard deviation score, the more volatile the fund.

**Sharpe Ratio** - the Sharpe ratio measures the fund's risk adjusted return. It shows the ratio of a fund's excess return (i.e. the return in excess of that from a 'risk-free' asset, say, Treasury Bills) to the level of risk taken (i.e. the fund's standard deviation). The higher the score, the better the risk/reward trade-off of the fund.

**Information Ratio** - measures management efficiency, describing the relation of excess return to its standard deviation. The excess return is the difference between fund's and benchmark's rate of return. Benchmark tracks the results of a fund group homogeneous in terms of investment policy.

## important information - read carefully

This is an advertising information. This material does not contain sufficient information to make an investment decision. The promoted investment means the purchase of participation units.

Detailed information concerning the ESALIENS Stable Subfund ("subfund") within ESALIENS Parasol FIO (ESALIENS Umbrella Open-End Investment Fund, the "fund") is included in the Prospectus and the Key Investor Information Documents available on the [www.esaliens.pl](http://www.esaliens.pl) website, at individual fund distribution outlets as well as in written form in the registered office of ESALIENS TFI SA (ul. Warecka 11a, 00-034 Warsaw). The Prospectus as well as the Key Investor Information Documents include data required to evaluate an investment, the risks connected with participation in the fund, and inform on the related costs, charges and taxes. **Before investing in the subfund, you should read the Prospectus and the Key Investor Information Documents issued for the selected subfund unit category.**

Past performance is no guarantee of future returns. The subfund's performance is reported before capital gains tax and the fees related to the investment units offered. Individual return rates depend on the unit purchase and redemption dates as well as on the amount of administration fee charged and the amount of tax due.

The fund does not guarantee that the subfunds investment objective or a specific investment result will be achieved. Fund participants must take into account the possibility of losing at least a part of their investment. The fund may invest more than 35% of the subfund's asset value in securities issued, backed or guaranteed by the Treasury, the National Bank of Poland, the European Bank for Reconstruction and Development or the European Investment Bank. This document is intended for advertising purposes only; the graphs, diagrams and tables included herein are for illustration purposes only and do not constitute forecasts.

This document does not constitute an offer within the meaning of the Polish Civil Code or a public offering within the meaning of the Act on Public Offering, Conditions Governing the Introduction of Financial Instruments to Organised Trading, and Public Companies, investment advice, any other advice or recommendation with respect to the purchase or sale of any financial instruments.
